

CLAIMS

- 1.) A clothes hanging device used particularly for the comfortable transportation of articles of clothing within the interior of a passenger vehicle behind the back and head rests of the seat, consisting of a clothes hanger body, *whereby* the clothes hanger body (1) is mounted in fixed fashion to a clothes hanger supporting rod (2), the lower end of which is inserted into a matching fitting (4).
- 2.) The clothes hanging device according to claim 1, *whereby* the matching fitting (4) is a pipe-like body of rectangular cross-section, into which the clothes hanger supporting rod (2), also of rectangular cross-section, is inserted.
- 3.) The clothes hanging device according to claim 1 or 2, *whereby* the matching fitting (4) is mounted directly, in fixed fashion, onto the upper part of the back rest of the seat.
- 4.) The clothes hanging device according to claim 1 or 2, *whereby* the matching fitting (4) is mounted in fixed fashion to a telescopically constructed connecting piece (3) that connects the two head rest support rods.
- 5.) The clothes hanging device according to any of claims 1 through 4, *whereby* a hook (5) to accommodate the placement of further conventional clothes hangers is mounted to the upper end of the clothes hanger supporting rod (2) that projects beyond the clothes hanger body (1).
